SPECIMEN : SWAB

PCR Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2)

Result:

SARS-CoV-2: Detected

Method:

RNA is extracted and subjected to PCR according to the manufacturer's protocol.

Comments:

- Reverse Transcription-Polymerase Chain Reaction (RT-PCR) test is performed to diagnose SARS-CoV-2.
- Results should be interpreted in conjunction with other laboratory and clinical findings.

Note:

SARS-CoV-2 test carried out in different laboratories cannot always be directly compared with one another, due to differences in specimen storage, transport, quality control standards, sensitivity and specificity of the assays used and other variables.
